WASTE DISCHARGE REQUIREMENTS
FOR
CITY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS (LADPW)
(Harbor District Emergency Storm Drain Project)**

**NPDES NO. CAG994001
CI-8332**

PROJECT LOCATION

Anaheim Street at Schley Avenue
Wilmington, CA 90731

FACILITY MAILING ADDRESS

638 S. Beacon Street, Suite 402
San Pedro, CA 90731

PROJECT DESCRIPTION

On September 14, 2001, the LADPW discovered a large cavity beneath Anaheim Street at Schley Avenue. The cavity resulted from a damaged 39-inch diameter storm drain. The LADPW is proposing to repair the damaged line which is approximately 10 feet below finished grade. Dewatering is anticipated during the project and will take approximately two weeks. Extracted groundwater will be pumped to a desilting basin prior to discharge to the storm drain.

VOLUME AND DESCRIPTION OF DISCHARGE

The LADPW will discharge up to 0.144 million gallons per day (mgd) of groundwater. The water is discharged into storm drain (Latitude 33° 43' 29", Longitude 118° 16' 51"), thence into Dominguez Channel which flows into Los Angeles Harbor, a water of the United States. The site location is shown as Attachment I.

FREQUENCY OF DISCHARGE

The discharge will be intermittent and will begin in October 2001.

REUSE OF WATER

This is a short duration discharge that will last for two weeks. The discharge water will be highly saline and have no feasible reuse options.
